

SS Stainless Steel

3 Type

- A** Latch position right-angled to mounting holes
- B** Latch position parallel to mounting holes

Information

With GN 722.2 square cam action spring latches, the latch pin is withdrawn over the cam of the body by rotating the lever arm 180°. If the latch pin may need to be retracted periodically, the notch allows for safe positioning while the latch pin is held in the retracted position. The ZB and SW versions are designed for applications in steel construction, whereas the A4 stainless steel version is suitable for use in particularly aggressive environments.

The dimensional tolerances between latch pin and body are selected so that the functional reliability is guaranteed even with rough applications or in case of contamination.

There are several options for fastening. The hexagonal mounting holes allow the use of DIN 912 socket cap screws and hexagon screws or nuts according to DIN 931 or DIN 934.
