Specification

- Outer race
Plastic (Polyacetal POM)
Operating temperature:
-4 °F to 212 °F (-20 °C to 100 °C)
- Ball bearing
- Steel, 100Cr6, hardened
- Covered (cover discs 2Z)
- Stud
Steel, zinc plated
- Plastic Characteristics → page QVX
- RoHS compliant

Information

Guide rollers GN 753.1 can be used as guides, bearings or supports for small to medium loads. They can also be used to create custom linear guide rail systems.

The radial load capacity rating given in the table should be understood as a guide value at which the guide rollers achieve a lifetime performance of at least 656,167 ft (200,000 m). The conditions for achieving this lifetime performance are a speed of 1.3 ft/s (0.4 m/s), a clean, dry, level, smooth and hard surface to roll against and an operating temperature between 59 °F and 86 °F (15 °C and 30 °C). In general, the guide rollers should not be used under axial load.
