**Information**

The clamping bores of GN 141 flanged two-way connector clamps are not machined and designed for GN 990 or DIN 2391, DIN 2395 and DIN 2462 construction tubes. The versions with square bores are also suitable for use with profile systems. At the screw locations z₁ / z₂, the socket cap screws reduce the bore cross-section for clamping. For clamping without tools, the socket cap screws z₁ can be replaced by the GN 911 adjustable levers listed in the table as accessories.
