Information

GN 435.3 cabinet U-handles in tall design are made from bent round profiles and are mounted by welding. They are designed for applications requiring a greater height for gripping. For example, this makes it possible to grab or hold the handle while wearing safety gloves. Some dimensions also comply with the crane access standard DIN EN 13856.

In addition to serving as a handle, they can also be used as hose guides, retaining brackets or similar. If required, the holes d₂ serve for inserting dowel pins or location pins that position the cabinet U-handle in place via the alignment holes in the opposing part and thus easily fix the handle during the welding process.
